AI Engineer building production LLM agents and the evaluation infrastructure that keeps them reliable in regulated fintech — agent design and orchestration, rigorous LLM evaluation, and coding-agent workflows, owned end-to-end.

EXPERIENCE

Athena Money *Nov 2025 – Present*
Founding AI Engineer *San Francisco Bay Area*

- Designed and built the LLM evaluation platform that all underwriting-agent development runs on — a multi-turn framework with three evaluator types (trial-level LLM-as-judge rubrics, five-dimension per-turn quality scoring, outcome-checkpoint evaluators) and an LLM user-simulator for borrower conversations.
- Built field-level consensus evaluation — running an agent across N trials and computing per-field agreement with confidence-score calibration — plus statistical regression gating in tiered CI, with the eval driver on durable Temporal workflows so reruns stay reproducible.
- Shipped underwriting agents on Google ADK and Temporal (condo, homeowners-insurance validation, appraisal compliance, pre-close QC) and moved supervisor orchestration such as credit-freeze recovery into the agent/playbook layer.
- Rewrote the borrower follow-up system onto a multi-turn agent pattern, migrating each follow-up type with zero downtime.
- Built scheduled coding-agent workflows that ship changes across the stack, including a parity-monitoring agent, with audit events and fail-closed patterns.
- Built document-verification and extraction pipelines for regulated disclosures and closing documents, failing closed on malformed fields.

Zeta Global *Jun 2025 – Aug 2025*
Data Science & Generative AI Intern *San Francisco*

- Engineered a LangGraph-based supervisor agent that interprets and dynamically routes tasks to sub-agents, reducing manual workflow setup time by 70%.
- Built a multi-vendor (OpenAI, Anthropic, Amazon Bedrock) assistant-orchestration platform on FastAPI with PostgreSQL checkpointing, plus an evaluation framework tracking accuracy, consistency, latency, and cost.
- Co-invented a patent-pending adaptive feedback system (“Adaptive Neural Content Generation”) pairing LLMs and neural networks in a reinforcement-learning loop; deployed agents via REST APIs on Docker and Kubernetes.

NationBuilder *Jan 2025 – Nov 2025*
AI Research Intern (UCSB capstone project through Jun 2025) *Remote*

- Built a RAG pipeline with all-MiniLM-L6-v2 embeddings and FAISS to rank document relevance, reaching 93% relevance-classification accuracy.
- Capstone: scraped election data and built an agentic PDF-extraction system (GPT-4o) with strict JSON schemas.

SELECTED PROJECTS

Efficient LLM Fine-Tuning — independent research with Prof. Eric Suess, CSU East Bay *2026*

- Stacked five memory-saving techniques for fine-tuning SmolLM2 in PyTorch, raising the trainable step from 8,192 to 131,072 tokens in 71% of baseline memory; wrote a block-wise 8-bit AdamW that matched torchao’s to the byte.

Pokémon TCG AI Battle Challenge — Kaggle *2026*

- Agent for a hidden-information card game on a live ranked ladder: scripted expert policy, determinized whole-turn beam search, and a value network trained by self-play.

LLM 20 Questions — Kaggle *2024*

- Two-model agent on 4-bit quantized LLMs (Transformers, BitsAndBytes); ranked Top 50.

SKILLS

Languages: Python, Go, SQL, Java, JavaScript, R, C
LLM / AI: multi-agent orchestration (LangGraph, Google ADK, Temporal), RAG, vector search (FAISS), embeddings, LLM evaluation / LLM-as-judge, MCP (Model Context Protocol), prompt engineering, LangSmith, OpenAI / Anthropic / Bedrock APIs
ML: PyTorch, fine-tuning / PEFT (LoRA, QLoRA), vLLM, scikit-learn, TensorFlow, Node2Vec, feature engineering, hyperparameter tuning, calibration
Infra / MLOps: AWS (Bedrock), Google Cloud, Docker, Kubernetes, FastAPI, PostgreSQL, CI/CD, observability, Spark, Databricks

EDUCATION

University of California, Santa Barbara *Sep 2022 – Jun 2025*
B.S. in Statistics & Data Science, Minor in Mathematics *Santa Barbara, CA*

Patent pending: “Adaptive Neural Content Generation” — U.S. Provisional App. No. 63/943,780, filed Dec 2025 (first-named inventor).
